Medication Section

1.1 Managing Medicines

This school is committed to the proper management of medicines and there are clear procedures that must be followed.

- Most medicines should be prescribed in dose frequencies which enable them to be taken outside school hours.
- **In line with DFE guidance, only when a prescribed medicine is for more than x 4 a day, then school will facilitate this.**
- Medicines are only to be administered at school when it would be detrimental to a child's health or school attendance not to do so.
- No child under 16 is to be given prescription or non-prescription medicines without their parent's written consent - except in exceptional circumstances where the medicine has been prescribed to the child without the knowledge of the parents. In such cases, every effort will be made to encourage the child concerned to involve their parents while respecting the child's right to confidentiality.
- A child under 16 is never to be given medicine containing aspirin unless prescribed by a doctor. Medicine, e.g. for pain relief, is never to be administered without first checking maximum dosages and when the previous dose was taken. Every effort will be made to contact parents prior to administration, where necessary, to check this and to inform them that pain relief has been given.
- Only prescribed medicines that are in-date, labelled, provided in the original container as dispensed by a pharmacist and which include instructions for administration, dosage and storage are to be accepted. The exception to this is insulin which must still be in date but will generally be made available to school inside an insulin pen or a pump, rather than in its original container. This may also be the case for certain emergency administration medicines such as a reliever inhaler for the treatment of an asthma attack or adrenalin for the treatment of anaphylaxis. This is to be made clear within a child's IHCP as appropriate
- All medicines are to be stored safely, in their original containers and in accordance with their storage instructions. Medicines can be kept in a refrigerator containing food but should be in an airtight container and clearly labelled. Access to a refrigerator holding medicines should be restricted. If large quantities of medicine are kept refrigerated school will consider purchasing a lockable fridge. Children should always know where their medicines are kept and be able to access them immediately if they might need them. Where relevant, they should also know who holds the key to any locked storage facility. Medicines and devices such as asthma inhalers, blood glucose testing meters and adrenaline pens are to always be readily available to children and not locked away. Off-site this will be especially considered as part of the risk assessment process for educational visits.
- When no longer required, medicines will be returned to the parent for them to arrange safe disposal. Sharps boxes will always be used for the disposal of needles and other sharps.

1.1.1 Controlled Drugs

The supply, possession and administration of some medicines e.g. methylphenidate (Ritalin) are strictly controlled by the Misuse of Drugs Act 1971 and its associated regulations and are referred to as 'controlled drugs'. Therefore, it is imperative that controlled drugs are strictly managed between school and parents.

Ideally, controlled drugs should be brought into school daily by parents and the medicine details and quantity handed over be carefully recorded on the child's own Record of Medicine Administered to an Individual Child sheet (Appendix D). This sheet must be signed by the parent and the receiving member of staff. If a daily delivery is not a reasonable expectation of the parent, supplies should be limited to no more than one week unless there are exceptional circumstances. In some circumstances, the drugs may be delivered to school by a third party e.g. transport escort. In this case, the medicine should be received in a security sealed container/bag.

We recognise that a child who has been prescribed a controlled drug may legally have it in their possession if they are competent to do so but passing it to another child for use is an offence. Monitoring arrangements may be necessary and will be agreed on in the IHCP, otherwise school will keep controlled drugs prescribed for a pupil securely stored in a non-portable container to which only named staff will have access. They will still be easily accessible in an emergency and clear records kept of doses administered and the amount of the controlled drug held in school.

School staff may administer a controlled drug to the child for whom it has been prescribed in accordance with the prescriber's instructions and a record will be kept in the same way as for the administration of other medicines. It is considered best practice for the administration of controlled drugs to be witnessed by a second adult. The name of the member of staff administering the drug will be recorded and they will initial under 'Staff initials (1)'. The second member of staff witnessing the administration of controlled drugs will initial under 'Staff initials (2)'. These initial signatures should be legible enough to identify individuals.

1.2 Record Keeping

School will keep a record of all medicines administered to individual children, stating what, how and how much was administered, when and by whom. Any side effects the pupil experiences are also to be noted.

Where a pupil requires administration or self-administration of a controlled drug they will have an individual record sheet which allows for the signature of a second witness to the administration. Details of receipts and returns of the controlled drug will be accurately recorded.

Where a pupil is given a medicine as a one-off e.g. pain relief, it will be recorded on a general record sheet along with such medicines administered to other children

1.3 Emergency Procedures

The child's IHCP should be the primary reference point for action to take in an emergency. It will clearly state what constitutes an emergency for that child and include immediate and follow-up action.

To ensure the IHCP is effective, adequate briefing of all relevant staff regarding emergency signs, symptoms and procedures is required and will be included in the induction of new staff, re-visited regularly and updated as an IHCP changes. Similarly, appropriate briefings

for other pupils are required as far as what to do in general terms i.e. inform a teacher immediately if they think help is needed.

In general, immediately an emergency occurs, the emergency services will be summoned in accordance with normal school emergency procedures.

If a child needs to be taken to hospital, a member of school staff will remain with them until a parent arrives. This may mean that they will need to go to hospital in the ambulance.
